ANZAZ app – Deliverable 2

Functional Requirements

1. The system shall allow users to create an account and log in
2. The system shall allow users to capture images using the device camera
3. The system shall identify species using an integrated database or API
4. The system shall display detailed information about the identified species
5. The system shall store user observations with location and timestamp
6. The system shall allow users to view previously recorded observations
7. The system shall track species occurrence in specific geographic areas
8. The system shall provide a map view of recorded biodiversity data
9. The system shall reward users with points or badges for contributions
10. The system shall allow administrators to manage and validate data

Non-Functional Requirements

1. The system shall process image recognition within 3 seconds.
2. The system shall support multiple users simultaneously
3. The system shall protect user data through authentication and encryption
4. The system shall ensure secure storage of location data
5. The system shall provide a simple and intuitive mobile interface
6. The system shall be accessible on both Android and iOS devices
7. The system shall ensure 99% uptime
8. The system shall store data reliably without loss
